$C_{SW}^{(1)}$

(Written by Maximilian Ammer, 2023)

This notebook calculates the one-loop value of the improvement coefficient C_{SW}.

By choosing c1=0 or c1=-1/12 one can choose between the plaquette-(Wilson) gluon action or the Lüscher-Weisz gluon action.

By loading the appropriate files for the definition of the vertices V1, V2, V3 one can choose between the Wilson and the Brillouin fermion actions.
